

SUMMARY OF THE STUDY REPORT # DA24A668

ASSESSMENT OF THE SENSITIZING POTENTIAL OF A COSMETIC PRODUCT: FINAL CLINICAL SECURITY TEST UNDER DERMATOLOGICAL CONTROL			
Objective	To confirm that repeated applications of the product under maximized conditions, in healthy subjects, does not induce delayed contact allergy reactions.		
Methodology	Descriptive, Monocentric and single blind study.		
Assessment criteria	- Assessment of erythema and oedema - Irritation: MCII (Mean Cumulative Irritation Index) calculation - Sensitization: ICDRG scoring		
Kinetics	Induction : 3 weeks Rest / Rest : 2 weeks Challenge : 1 week		
Dates	Product reception: December 25, 2024	Study start: February 24, 2025	Study end: April 4, 2025
Product	Reference: MOLECULOGY BRIGHTENING AND SOFTENING LIP MASK	Form: Opaque peach lip mask	Storage temperature: Room temperature (Thailand climate) (Avoid sunlight and heat)
Application	Zone: Scapular part of the back	Concentration Pure	Patch type: Occlusive
Studied Population	Main inclusion criteria Age between 18 and 60 years old. Phototype II to IV.	Average age: 48±1 years (18 - 60)	Number of subjects analysed: 53
Results	Irritating potential - Induction phase: Very slightly irritating Sensitizing potential - Challenge phase: Non sensitizing		
Investigator: Dermatologist	Name and quality:	Date: May 19, 2025	Signature:
